This report provides the detailed results for each question from this school/district's 2016–17 *California Healthy Kids Survey* (CHKS), presented in tables organized by topic.

The CHKS, along with its two companion surveys—*California School Climate Survey* (CSSS) for staff and the *California School Parent Survey* (CSPS)—is a service of the California Department of Education (CDE). These three surveys form the *California School Climate, Health, and Learning Survey* (Cal-SCHLS) System, the largest, most comprehensive effort in the nation to regularly assess students, staff, and parents at the local level to provide key data on school climate and safety, learning supports and barriers, and stakeholder engagement, as well as youth development, health, and well-being. Exhibit 1, at the end of the Preface, presents the major school-related domains and constructs assessed by Cal-SCHLS at the elementary level.

These surveys grew out of CDE's commitment to helping schools promote the successful cognitive, social, emotional, and physical development of all students; create more positive, engaging school environments for students, staff, and parents; and ensure college and career readiness. They provide a wealth of information to guide school improvement and **Local Control and Accountability Plan** (LCAP) efforts, particularly in regard to the state priorities of enhancing school climate, pupil engagement, and parent involvement.

Factsheets, guidebooks, and other resources to help in understanding and using CHKS results are available for downloading from the survey website (chks.wested.org), including *Helpful Resources for Local Control and Accountability Plans* (chks.wested.org/resources/LCAP_Cal_SCHLS.pdf). The California Safe and Supportive Schools website (californias3.wested.org/) provides information and tools helpful in implementing effective strategies to address the needs identified by the survey.

The Cal-SCHLS Technical Assistance Center offers workshops to help identify local needs and develop action plans to meet those needs, including a *Listening to Students Workshop* for involving student voice in the process (see below).

THE SURVEY

The California Department of Education (CDE) has funded the CHKS since 1997 to provide data that would assist schools in: (1) fostering safe and supportive school climates, social-emotional competencies, and engagement in learning; (2) preventing youth health-risk behaviors and other barriers to academic achievement; and (3) promoting positive youth development, resilience, and well-being. A thorough understanding of the scope and nature of youth behaviors, attitudes, and learning conditions is essential to guide school improvement efforts, improve academic performance, and develop effective prevention, health, and youth development programs.

The CHKS is not just a standalone instrument but a data collection system that districts can customize to meet local needs and interests. The elementary-school CHKS consists of a required general Core Module and a series of optional, supplementary topic-focused modules, including a Social and Emotional Health Module (SEHM), that districts can elect to administer. Districts may also add their own questions of local interest in a custom module. Table 1 indicates the modules administered by the district/school.

Core Module

As outlined in Exhibit 1, the Core Module consists of key questions, identified by an expert advisory committee, that are considered most important for schools to guide improvement of academic, health, and prevention programs and promote student achievement, positive development, and well-being. The primary focus of the survey is assessing student perceptions and experiences related to school climate and engagement, learning supports, and health-related, non-academic learning barriers (e.g., substance use, bullying and violence, and poor physical and mental health).

To support school improvement efforts, the majority of questions on the CHKS assess school performance, engagement, climate, and experiences, including:

- School connectedness and learning motivation;
- Perceived safety and frequency of, and reasons for, harassment and bullying at school;
- The level of which students experience developmentally supportive caring adult relationships, high expectations, and opportunities for meaningful participation at school, three fundamental developmental supports (protective factors) that promote positive academic outcomes; and
- Supports for social emotional learning and positive behavior.

Supplementary Social Emotional Health Module (SEHM)

The (SEHM) greatly enhances the value of the CHKS as a strength- based assessment of positive emotions, engagement, ability to build and maintain relationships, and other social-emotional capacities linked to student mental health and well-being, academic success, and college and career readiness. It includes 35 items that capture the totality of core adolescent psychological assets.

SURVEY ADMINISTRATION AND SAMPLING

School staff administered the survey, following detailed instructions provided by CDE that were designed to assure the protection of all student and parental rights to privacy and to maintain confidentiality. Students were surveyed only with the consent of parents or guardians. Each students participation was voluntary, anonymous, and confidential. Table A1.1 gives the target sample of students and the final number and percent of students who completed the survey (the participation response rate).

THE REPORT

The tables in the Main CHKS Report, organized by topic, provide the percentages responding to each question response option by grade level. Because it is just as important to identify the positive behaviors of youth as it is to identify the risks they face, the tables reporting risk-behavior data include the percentages of youth who responded negatively (did not engage in the behavior). Percentages are rounded off to the nearest whole number.

UNDERSTANDING AND USING THE DATA

Understanding and using the survey results, especially for LCAP implementation and monitoring, *Making Sense of School Climate* provides a discussion of all the Cal- SCHLS secondary survey items that relate to school climate (download californias3.wested.org/resources/S3_schoolclimateguidebook_final.pdf). As the elementary survey assesses many of the same variables, this is also a useful guide for lower grade levels. Elementary results should be compared with those from students in middle and high schools to determine how student strengths and needs develop with age. In particular, results from middle school can help guide engagement, prevention, and health promotion efforts in elementary schools.

Care must be taken to understand the factors that can impact the quality, validity, and generalizability of the results. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the *CHKS Data Use and Dissemination Guidebook* (download chks.wested.org/resources/chks_guidebook_3_datause.pdf).

Sample Characteristics

Among the most important factors affecting the quality of survey results is the level of student participation. The validity and representativeness of the results will be adversely affected if the student response rate is lower than 70%. Even if the response rate is low, the results provide an indication of what those students who did respond felt about the school and their experiences and behavior.

Changes Between Survey Administrations

Many factors besides real changes in behavior, attitudes, or experiences among students may account for changes in results from administration to administration. Changes may be due to differences over time in the characteristics or size of the sample of students who completed the survey, changes in the questions themselves, or differences between the time periods in which the survey was administered (e.g., some risk behaviors tend to increase as students age, or may increase during holidays or social events).

RESOURCES

The CHKS and Cal-SCHLS websites contain guidebooks and other tools for using and understanding survey results, including factsheets that show how data variables are related and offer suggestions for how data can be analyzed at the local level.

CDE's California Safe and Supportive Schools website ([CaliforniaS3.wested.org](https://californias3.wested.org)) contains a wealth of information and tools related to school climate improvement and social-emotional learning. It includes factsheets analyzing Cal-SCHLS data and *What Works Briefs* that provide guidance on strategies to implement.

The School Climate Connection Newsletter provides monthly announcements of resources, tools, webinars and workshops, and research. Sign up on the CHKS or CaliforniaS3 websites.

Helpful Resources for Local Control and Accountability Plans (chks.wested.org/resources/LCAP_Cal_SCHLS.pdf) describes how survey items align with LCAP priorities and indicators. Also available is an LCAP-related PowerPoint presentation (chks.wested.org/training-support/workshops-presentations).

NEXT STEPS

Receiving this report is just a beginning step in a data-driven, decision-making process. The results of this student survey should be compared to those obtained from the Cal-SCHLS surveys of school staff and parents. It is important to determine how consistent are student, staff, and parent perceptions and experiences. The elementary results should be compared to the middle and high school results.

CHKS results will also be enriched if analyzed in the context of other data typically collected by schools that relate to the variables assessed, such as discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

The following custom services (additional fees apply), are available through the Cal-SCHLS TA Center to help in fostering effective use of the results and provide additional information to support school and program improvement efforts and the LCAP process.

Request School Reports

If the schools in the district vary significantly in demographics, programs, or other characteristics, consider requesting individual reports for each school (a fee applies).

Request Disaggregated Report or Analyses

The staff of the Regional TA Centers can produce reports that show how results vary by subgroups. For example, what are the characteristics of youth who are low in perceived safety, school connectedness, or academic motivation compared those who are high? This is particularly important given the LCAP requirements to address these needs. This helps in understanding the meaning of the results and developing interventions that target groups most in need.

Conduct Additional Analyses of Dataset

The complete dataset is available electronically for additional analysis (there is a small fee for preparation). The dataset enables analyses of patterns in the results, how they are interrelated, and how they vary by different subgroups of student and across schools within a district. You can also request an analysis by subgroups as a custom service.

Add Questions to Your Next Surveys

Determine what additional information is needed from students to guide school improvement efforts and add questions to your next CHKS or CSSS. Both surveys were designed so that schools can add additional questions to help them conduct a more individualized and comprehensive assessment.

Engage with Students, Staff, and Parents in an Action Planning Process

Engage students, staff, and parents in reviewing and exploring the meaning of the results and obtain their input into how the school might better meet the identified needs and into the development of a detailed action plan. This communicates to stakeholders that you value their input into how to improve the school and gives them an opportunity for meaningful participation. This helps enhance pupil engagement and parent involvement, two LCAP priorities. It will also promote higher rates of participation the next time the survey is administered, as stakeholders will see how the data has been used for positive purposes.

On request, Cal-SCHLS staff can conduct a structured group *Listening to Students Workshop* designed to explore with students, as staff observe, the meaning of survey results and obtain their input on how to address the needs identified by the survey. Cal-SCHLS staff also can conduct a *Data Use Action Planning Workshop* designed to identify local needs based on the survey results and engage stakeholders in developing a detailed plan and timetable for meeting those needs using evidence-based strategies. For more information, contact your Cal-SCHLS Technical Assistance Center (call 888.841.7536 or email schoolclimate@wested.org). See also: californias3.wested.org/training-support/workshops.
