PREFACE

This report provides the detailed results for each question from this district's 2010-11 *California Healthy Kids Survey* (CHKS), presented in tables organized by topic. In addition to this Main Report, the *CHKS Key Findings* provides a summary of selected results with graphic presentations and short discussions. To help in understanding and interpreting these results, the *CHKS Survey Content Guidebook*, (chks.wested.org/reports) discusses the significance of each question. Several other tools to help in data use are also available, as described below.

The results of this student survey should be compared to those obtained from school staff from the companion *California School Climate Survey* (CSCS). It is important to determine whether staff perceptions accurately reflect student behaviors and experiences. The *CHKS Survey Content Guidebook* provides a cross-walk between the two surveys' questions to facilitate this comparison. Combined, the CHKS and CSCS provide a comprehensive assessment of the school climate and the needs of students and staff to guide school improvement efforts. For additional information and resources, visit the survey websites: chks.wested.org and cscs.wested.org.

SURVEY PURPOSE

The CHKS and CSCS form the largest, most comprehensive effort in the nation to assess *local* students and staff on a regular basis to provide key data on learning barriers, engagement, and supports. The California Department of Education (CDE) funded the CHKS in 1997 to provide data that would assist schools in: (1) preventing youth health-risk behaviors and other barriers to academic achievement; (2) promoting positive youth development, resilience, and well-being; and (3) fostering positive school climates and engagement in learning. A thorough understanding of the scope and nature of youth behaviors, attitudes, and learning conditions is essential to guide school improvement efforts and develop effective prevention, health, and youth development programs. These surveys grew out of CDE's commitment to helping schools promote the successful cognitive, social, and emotional development of all students and create more positive, engaging school environments for both students and staff.

SURVEY CONTENT OVERVIEW

The CHKS consists of a required general Core Module and a series of optional supplementary topic-focused modules that districts can elect to administer. Districts may also add their own questions of local interest in a custom module. Table A1.1 indicates the modules administered by the district. The Core Module consists of a broad range of key questions identified by an expert advisory committee considered most important for schools to administer to guide improvement of academic, health, and prevention programs and the promotion of student achievement, positive development, and well-being.¹ The primary focus of the Core Module is assessing student perceptions and experiences related to school climate and engagement, learning supports, and health-related, non-academic learning barriers (e.g., substance use, bullying and violence, and poor physical and mental health).

¹ The CHKS Guidebook to Survey Administration contains detailed information about the content of all the survey modules. The modules themselves can be downloaded from the website.

School-Related Content

To support school improvement efforts, the majority of questions on the CHKS assess school performance, engagement, climate, performance, and experiences. The survey provides self-report data on:

- school connectedness;
- the level of which students experience caring adult relationships, high expectations, and opportunities for meaningful participation at school, three fundamental developmental supports (protective factors) that promote positive academic outcomes; and
- perceived safety and frequency of, and reasons for, harassment and bullying at school

SURVEY ADMINISTRATION AND SAMPLING

School staff administered the survey following detailed instructions provided by CDE designed to assure the protection of all student and parental rights to privacy and maintain confidentiality. Students were surveyed only with the *consent of parents or guardians*. Each student's participation was voluntary, anonymous, and confidential. Table 1.1 gives the target sample of students, and the final number and percent that completed the survey (the participation response rate).

THE REPORT

The tables in this Main CHKS Report provide the percentages responding to each question response option by grade level, organized by topic. Because it is just as important to identify the positive behaviors of youth as it is to identify the risks they face, the tables include the percentages of youth who do not engage in each risk behavior. Percentages are rounded off to the nearest whole number.

AIDS TO UNDERSTANDING AND USING THE DATA

Several guides, workshops, and other aids are available to help you understand and use survey results. These are described and made available on the survey website. Three are particularly important.

- To help in understanding and interpreting these results, a ***Survey Content Guidebook*** provides a detailed explanation of each question and its significance (why it was asked) and the potential implications for programs of the results.
- The CHKS ***Data Use and Dissemination Guidebook*** describes a step-by-step process for reviewing, analyzing, and disseminating your results as part of a data-driven decision making process for program improvement. Free call-in data use workshops are offered as well.
- A ***Workbook on Improving School Climate and Closing the Achievement Gap*** provides a practical guide to using the data in the framework of improving academic achievement and well-being among all students and closing the achievement gap. It provides examples of how to use the data to improve practice and policy. A workshop accompanying this Workbook will be available in 2011.

ASSESSING THE DATA

Care must be taken to fully understand the survey, the context within which the data were collected, and the factors that can impact the quality, validity, and generalizability of the results, the changes obtained between administrations, or differences between your results and those from other districts or state norms. The following are a few of the key issues that should be kept in mind. A more detailed discussion of these topics can be found in the *CHKS Data Use and Dissemination Guidebook*.

Representativeness

Among the most important factors affecting the quality of survey results is the level of student participation. The validity and representativeness of the results will be adversely affected if the student response rate is lower than 60%. One indication of the survey's representativeness is how accurately the sample reflects the gender and ethnic composition of the district's student enrollment. Even if the response rate is low, the results provide an indication of what those students who did respond felt about the school and their experiences and behavior.

Changes Between Surveys

Many factors may account for changes in results from administration to administration besides real changes in behavior, attitudes, or experiences among students. The change could be due to differences over time in the characteristics or size of the sample of students who completed the survey, or changes in the questions themselves, or differences in the time period in which the survey was administered (e.g., some risk behaviors tend to increase with age, and be higher after holidays or even a social event).

NEXT STEPS

Receiving this report is just a beginning step in a data-driven, decision-making process. The following describes actions you can take to analyze and use the results and provide additional information to support school- and program- improvement efforts.

Request School Reports

Individual school-level reports may be of interest for many reasons. Primary among these is the interest of staff and parents about their own local school results, especially if the schools vary significantly in demographics, programs, or other characteristics. A comparison among schools may also prove useful in identifying sites which might benefit from special work or interventions. A small fee applies. (For large districts that sample schools and students, the sample may not support school reports.)

Compare with Other Data Sources

CHKS results will be enriched if analyzed in the context of data from the California School Climate Survey and other sources, particularly in identifying consistent patterns. Other data typically collected in effectiveness studies of school climate include number and kinds of discipline referrals, school demographic information, school vandalism costs, and behavioral observations in classrooms.

Discuss with Students and Staff

Discuss the results with both students and staff to explore their meaning in more depth and obtain their input into how the school might better meet the needs identified. This is especially important because it communicates to students that you value their input into how to improve the school and gives them an opportunity for meaningful participation. As such, it helps improve

their perceptions of the developmental supports and opportunities that the school offers and their school connectedness. Survey staff can provide information on conducting structured group “listening” discussions of the data with youth focused on obtaining their input on how to address the needs identified by the survey.

Conduct Additional Analyses of The Dataset

The complete dataset is available electronically for analysis (there is a small fee for preparation). The dataset enables analyses of patterns in the results, how they are interrelated, and how they vary by different subgroups of students and across schools. Particularly valuable in understanding factors that may affect student achievement is examining how other variables relate to student reports of attendance, grades, and school connectedness.

Add Questions to your Next CHKS

Determine what additional information is needed from staff to guide school improvement efforts and add questions to your next CSCS or CHKS. Both surveys were designed so that schools can add additional questions to help them conduct a more individualized and comprehensive assessment.
